SUMMARY

Backend Software Engineer with 5+ years building scalable, high-traffic systems, currently at MercadoLibre serving 1M+ customers. Specialized in Go and Java microservices, event-driven architecture with Kafka, cloud infrastructure on Azure and GCP, and end-to-end observability. Focused on performance, reliability, and clean, well-instrumented services.

TECHNICAL SKILLS

Languages: Go, Java, Python, C, JavaScript, SQL

Backend & Architecture: Microservices, REST APIs, Event-Driven Systems, Concurrency (goroutines), In-Memory Caching

Messaging: Apache Kafka, Confluent Cloud, Avro / Schema Registry

Cloud & DevOps: Azure (AKS, Functions), Google Cloud Platform, Terraform, Kubernetes, Docker, Jenkins, CI/CD

Observability: OpenTelemetry, New Relic, Grafana, Datadog, Kibana

Data: PostgreSQL, Redis, SQL

Frameworks & Tools: Spring, Spring Boot, JUnit, Git / GitHub, Linux

EXPERIENCE

MercadoLibre

Oct 2022 – Present

Software Engineer (Go)

Remote

- Design, develop, and deploy scalable backend services for e-commerce platforms serving 1M+ customers, applying modern engineering practices across the full delivery lifecycle.
- Built end-to-end observability and quality-assurance pipelines with OpenTelemetry, integrating New Relic, Grafana, Datadog, and Kibana, and authored custom instrumentation to minimize external dependencies [*reduced monitoring overhead / costs by X%*].
- Used Go goroutines for concurrent I/O-bound processing and implemented an in-memory caching layer that accelerated data retrieval and [*increased throughput by X% / cut p99 latency by X ms*].

ExxonMobil

Jul 2021 – Oct 2022

Software Engineer (Java)

Curitiba, Brazil

- Developed synchronous Java APIs and Kafka-based integrations for [*describe system: internal order/commerce platform*], improving data flow across services.
- Provisioned and managed Azure infrastructure with Terraform, orchestrating containerized services and configuring Confluent Cloud Kafka with an Avro schema registry to compress payloads and optimize data throughput.
- Received a Leadership Recognition Award (2022) for driving the MSP transition program across planning, execution, and cross-team coordination.

Composable Bit

May 2021 – Jul 2021

Software Engineer (Java)

Remote

- Built modular software components tailored to dynamic system requirements.
- Orchestrated Azure microservices using Azure Kubernetes Service for containerized workloads and Azure Functions for event-driven serverless tasks.

Go44

Oct 2020 – Apr 2021

Software Engineer, Part-time (Ruby)

Remote

- Maintained core systems and developed a new module for the company's flagship product to support Industry 4.0 initiatives.

SaasTec Labs

Mar 2020 – Mar 2021

Software Engineer, Intern → Part-time (PHP)

Curitiba, Brazil

- Developed and maintained the company's PHP e-commerce platform, improving backend processes and the end-user experience.

Banco do Brasil

Jan 2019 – Mar 2020

Software Engineer Intern (Java)

Curitiba, Brazil

- Built internal applications using the MVC pattern with Java, JavaScript, and SQL.

PROJECTS

Financial Bot | Go, PostgreSQL, Redis

2021

- Built a personal finance management app to track income and expenses, manage investments, set goals, and send reminders; used Go for the backend, PostgreSQL for persistence, and Redis for caching and performance.

EDUCATION

USP / ESALQ

MBA in Data Science & Analytics (Online)

May 2022 – Feb 2024

Brazil
